PortfolioPlus S&P Mid Cap ETF

Overview

The PortfolioPlus S&P® Mid Cap ETF seeks daily investment results, before fees and expenses, of 135% of the daily performance of the S&P Mid Cap 400® Index. **There is no guarantee the fund will meet its stated investment objective.**

This leveraged ETF seeks a return that is 135% of the return of its benchmark index **for a single day. This ETF should not be expected to provide 1.35 times the return of its benchmark's cumulative return for periods greater than one day.**

Investing in PortfolioPlus ETFs may be more volatile than investing in broadly diversified funds. Compounding affects all investments, but has more impact on leveraged funds, particularly during periods of higher index volatility and longer holdings periods. Returns may be negative in the same period that the index returns were flat or positive. PortfolioPlus ETFs are intended to be used by investors who understand leverage risk, the effects of compounding and who intend to monitor their portfolios.

Target Index

The S&P Mid Cap 400® Index (SPTRMDCP) measures the performance of 400 mid-sized companies in the U.S. The Index is a float-adjusted market capitalization weighted index composed of liquid common stocks. **One cannot directly invest in an index.**

Shares of the Direxion Shares are bought and sold at market price (not NAV) and are not individually redeemed from a Fund. Market Price returns are based upon the midpoint of the bid/ask spread at 4:00 pm EST (when NAV is normally calculated) and do not represent the returns you would receive if you traded shares at other times. Brokerage commissions will reduce returns. Fund returns assume that dividends and capital gains distributions have been reinvested in the Fund at NAV. Some performance results reflect expense reimbursements or recoupments and fee waivers in effect during certain periods shown. Absent these reimbursements or recoupments and fee waivers, results would have been less favorable.
